

Secure Transport

The fast, reliable, secure way to send payment messages over the Internet.

Whether you do business in person, online, over the phone or through the mail, you and your customers need payment processing that delivers low cost, convenience, reliability and data security. Reducing costs helps keep your business competitive. Fast, easy, reliable transactions help keep your customers coming back. And security against fraud and theft protects both your customers and your business.

The patented Secure Transport network from First Data helps you meet all these essential business demands. It provides a fast, reliable and secure way to use the Internet to connect with payment processors. And Secure Transport is easy to install and use, with integration options designed to meet the needs of every business, including specialized Dial/VSA-to-Secure-Transport hardware converters for Petroleum and C-Store point-of-sale (POS) applications, plus software for businesses with Windows®-based POS applications.

Secure Transport

- Provides substantial savings, compared to the cost of dedicated dial-up, frame, VPN, MPLS, or VSAT connections
- Integrates easily with existing POS equipment and software applications.
- Works with any type of Internet connection
- Increases customer convenience and satisfaction by cutting authorization times to as little as two to four seconds
- Secures sensitive customer data before transmission to simplify Payment Card Industry (PCI) compliance
- Authenticates and manages every transaction
- Delivers consistent performance: no network outages in seven years of operation

Secure Transport provides fast, reliable, secure and economical online connections with payment processors.

Secure Transport

Integration Options

Secure Transport API

The simple, fast, secure choice for most businesses

- Easy to integrate with most POS terminals and systems (Java, Unix, XML, DLL, etc.)
- Includes integration and certification support
- Supported by more than 150 POS vendors
- Integrated in First Data terminals

Secure Transport MicroNode™ 1400

A simple, cost-effective solution, specially designed for businesses such as Petroleum and C-Stores that currently use dial-up lines or VSAT communications

- Plug-and-play hardware protocol converter
- Connects stand-alone POS terminals or POS store systems to the Secure Transport network
- Speeds transaction times
- Eliminates the cost of dedicated dial-up lines or VSAT communications
- Includes dial back-up

Secure Transport NAM

Secure Transport IP connectivity for Windows-based POS applications that are currently certified to First Data using dial-up or costly dedicated IP connections like Frame or VPN

- Plug-and-play software
- Emulates a modem on the PC while converting the message to Secure Transport IP in order to communicate with the Secure Transport network
- Eliminates costly Frame, VPN or MPLS communication services
- Speeds transaction times

Partner With First Data

- Get more value from your eCommerce payment processing
