

First Data Virtual Terminal

First Data®

Accept credit card payments with just a computer and Internet connection

Today's customers want choices when it comes to how they order and pay. With First Data's Virtual Terminal Solution you can offer customers the convenience of using their credit cards to pay for phone or mail orders. All you need is a computer and Internet access to manually process credit cards.

First Data Virtual Terminal provides secure and PCI compliant online access to process payments. Simply login to our Virtual Terminal, select a transaction type, and key in the order information, including payment card details. Within seconds you'll receive confirmation of the transaction and a receipt is sent to your customer. That's it.

You can customize the First Data Virtual Terminal for your specific needs. Create unique merchant profiles, detailed reports and recurring payments.

All of your staff can process payments wherever they are working with First Data Virtual Terminal; from call centres, traveling sales teams to small offices, First Data Virtual Terminal is an easy, cost-effective way to process card payments to save time.

Virtual Terminal at a glance

An affordable, simple alternative to point of sale terminals

- Process all major credit and Visa Debit card payments right from your computers
- Process purchases, recurring payments, pre-authorizations and adjustments
- Block problem card numbers from future transactions
- Robust online and downloadable reports that can be imported into your accounting software
