

First Data iWL252 Bluetooth

Provide convenience and fraud protection to customers right at their tables

Your guests want good food, friendly service and a hassle-free dining experience. While it may not be top-of-mind when they're browsing your menu, they also want assurance that their payment card data is protected. The good food is up to you, but First Data can help streamline and secure the checkout process with our Pay at the Table application and terminal.

When it's time to pay, instead of servers taking guests' credit or debit cards to a central terminal to process, they simply bring a small hand-held terminal to the table. The transaction is processed right there without guests ever losing sight of their payment cards. Pay at the Table protects against fraud and speeds up the payment process for both guests and servers.

Increase productivity and security

Pay at the Table increases the productivity of your servers and also protects your business from the risk of data breaches. With Pay at the Table, every transaction is encrypted and secured, so you no longer store actual credit card numbers.

Protect your guests, improve service and even increase business all with the easy-to-use Pay at the Table app and terminal.

First Data®

iWL252 Bluetooth at a glance

Put an end to guests waiting to pay and concerns about fraud

- Increase table turnover with a faster payment process
- Improve wait staff productivity by reducing back-and-forth to a point of sale terminal
- Enhance the guest experience
- Reduce chargebacks by accepting chip & PIN payment
- Reduce fraud with at-table processing and data encryption
- Improve efficiency by integrating First Data payment processing with any of the 20+ enabled Restaurant Management Systems (RMS)
